

Uninstalling Unneeded Software

Summary

This document shows you how to uninstall unneeded software on your PC. By uninstalling software that you do not use you could help speed up your PC and create more storage space on your hard-drive.

How to Uninstall Unneeded Software

1. Click on Start
2. Click on Settings
3. Click on Control
4. Click on Add/Remove Programs
 - The Add/Remove Programs window will appear. (See Figure 1)
5. Select the software that you wish to remove by clicking on it.
 - It will then be highlighted. (See Figure 1)
6. Click on the Remove button or the Change/Remove button (if applicable)
 - A wizard will walk you through uninstalling the software.
 - It is recommended that your restart your PC once you have removed the software.
