Bearcat Tip of the Month

Trash Handling Injury Prevention

1. Don’t try to move or lift more than you can handle.
2. Assign someone to periodically check carts and dollies to ensure that the wheels function properly.
3. Place an EMPTY milk crate in the bottom of trash cans to reduce volume and weight.
4. Put slide bars vertically (up and down) inside of the trash cans to reduce suction and resistance.
5. Don’t “wind-up” or twist your body while throwing trash into the dumpster. Seek help or use equipment to lift trash.
6. Use a broom or other tool to push down trash in a trash can and avoid a puncture wound from can lids or broken glass.
7. Watch for trip or bump hazards while removing trash.
8. Latch dumpster lids open or secure lids during windy conditions to prevent the lids from injuring you. *
